

Diamond Drill

Out of the Past

November 20, 1925

Crystal Falls has been chosen by the Michigan State Highway Department as the headquarters for the tenth district. This means that resident engineers of the district will be located here as will the residency offices. Two engineers are located at each headquarters, one in charge of maintenance and the other in charge of construction. District nine, with headquarters in Newberry, is the only other Upper Peninsula district. Escanaba is one of five supervising headquarters located throughout the State.

Crystal Falls' fire alarm system is misunderstood by many. City Manager Sanders has posted the proper directions for use. In order to turn in a Fire Alarm over the Fire Alarm System: Step up to the box and break glass in the door. You will then find a key, reach in and turn key to the right and pull open the door. You will then find a lever in the inside door, pull this lever down once all the way and let go of the lever. Then close and lock the door. Remaining near the box to direct the fire truck to the fire.
