

Diamond Drill

Out of the Past

May 12, 1960

Over 3,000 area residents took advantage of the invitation to visit the new Peter Robarge model home at 106 Oswald Street near the Odgers Location just west of the Crystal Falls City limits. Robarge owns and operates the Crystal Lumber Company and took the opportunity to showcase the application of modern building materials and construction techniques. The house construction is unusual for this area with a totally flat roof supported by large beams that are exposed throughout the interior of the home. Formica is used in every room of the house including countertops and wall surfaces. The home has no basement and utility room is located just of the kitchen.

Miss Nancy Anderson of Iron River has been hired by the Crystal Falls School District as instructor for girl's physical education beginning in September. The new phy-ed instructor will graduate this June from Northern Michigan University with her bachelor's degree in physical education with minors in biology and history. She is a four year veteran of service with the Navy WAVES. Anderson will replace Miss Mildred Martin who has taught in that capacity since she first accepted the position with the local schools in 1927.
